DETAILED OFFICE ACTION

Lack of Unity

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions that are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

- I. Claims 1-31, drawn to substituted Pyrazole compounds of Formula I, classified in class 548, subclasses 373.1 and 375.1, *inter alia*, pharmaceutical compositions thereof and therapeutic methods using compounds of Group I, classified in class 514, subclasses 403 and 404, *inter alia*.
- II. Claims 1-31, drawn to substituted Isoxazole compounds of Formula I, classified in class 548, subclasses 240, 243, 245, *inter alia*, pharmaceutical compositions thereof and therapeutic methods using Group II compounds, classified in class 514, subclasses 378, *inter alia*.
- III. Claims 1-31, drawn to all other substituted 1,2-Azole compounds of Formula I, classified variously in class 544, and pharmaceutical compositions thereof and therapeutic methods using compounds of Group III, classified variously in class 514.
- IV. Claim 32, drawn to a method of producing a compound of the formula II-1, classified variously in class 544.
- V. Claim 33, drawn to a formula IX compound, classified variously in class 544.

Each group as set forth above lacks unity with each other group, i.e., there is no single general inventive concept. The unique special technical features in each group are the identities of the nitrogen containing 1,2-azole ring of Formula I and the other nitrogen containing 1,2-azole rings of other Formulae of the disclosure. The technical relationship among the inventions does not involve at least one common or corresponding special technical feature. The expression "special technical feature" is defined as meaning those technical features that define the contribution which each claimed invention, considered as a whole, makes over the prior art. In this case, a reference that could be used to reject substituted Pyrazole compounds of Formula I of Group I could not be used to reject substituted Isoxazole compounds of Formula I of Group II.

The Group I invention has special technical features not common to Group II and would be expected to be useful other than as disclosed, e.g., as PPAR ligand receptor binders (WO 06/064888). Also, the Group II invention has special technical features not common to Group I and would be expected to be useful other than as disclosed, e.g., as crop protection agents (CA Pat. 2100546).

A telephone call was made to Mr. Charles E. Van Horn on Aug. 10, 2007 to request an oral election to the above restriction requirement, but did not result in an election being made.

To preserve a right to petition, the reply to this Office Action must distinctly and specifically point out supposed errors in the restriction requirement, or the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
